SITHAFAL

Company Profile

Transforming IT challenges into secure, scalable and strategic solutions

SECURE • OPERATE • SUSTAIN

This profile consolidates information from the material supplied and the company's public website and LinkedIn company profile. It is intended as an informative overview, not an independently audited assessment.

1. Company overview

Sithafal Technologies is an IT and software services company focused on helping organisations simplify complex workflows, strengthen technology and security environments, improve operational efficiency, and adopt digital solutions. The company describes its work as combining software and application development, managed IT, cloud and infrastructure services, cybersecurity, data science, and AI/ML.

Its public messaging centres on transforming IT challenges into secure solutions and helping organisations streamline operations, boost productivity, and support business growth. The company's LinkedIn profile describes its operating approach through three themes: Secure, Operate, and Sustain.

Company facts

Company name	Sithafal Technologies / Sithafal Technologies Pvt. Ltd.
Industry	Software development and IT services
Headquarters	Tirupati, Andhra Pradesh, India
Founded	2022 (as listed on the company's LinkedIn profile)
Company type	Privately held (as listed on LinkedIn)
Company size	51–200 employees (LinkedIn company-profile range; not an audited headcount)
Website	https://www.sithafal.com

2. Vision

Sithafal's stated vision is a world where businesses of every size and across industries can use technology to create efficient, seamless workflows. The company aims to become a global leader in innovative software solutions that transform how businesses operate.

3. Mission

The company's stated mission is to develop and deliver software products that reduce the challenges of complex workflows. It emphasises intuitive, user-friendly tools that help teams work smarter and accomplish more.

4. Core values

Innovation: Continuously seeking better ways to solve IT challenges.

Collaboration: Working closely with clients to achieve shared success.

Integrity: Operating with honesty, transparency, and ethical behaviour.

Quality: Delivering high-quality IT solutions, pricing, and services.

Customer-centricity: Putting client needs at the centre of operations.

Flexibility: Providing flexible timelines and solutions to meet requirements.

5. Services and solution areas

The company website describes a portfolio spanning managed technology services, application delivery, cybersecurity, cloud and infrastructure, and AI/ML. The following summary reflects the service categories and examples described in its public pages.

Managed IT services
Ongoing management, monitoring, maintenance, and support for business technology environments. The website references IT infrastructure management, 24/7 support, cloud infrastructure management, cybersecurity, and proactive IT operations.

Managed user experience
Management and optimisation of Microsoft 365 workloads and user endpoints, including physical, mobile, and virtual devices, with a focus on compliance and improved business outcomes.

Managed cybersecurity
Security monitoring, incident response, Security Operations Centre (SOC) services, penetration testing, patch management, and virtual Chief Information Security Officer (vCISO) support.

Managed applications and application development
Development and management of web and mobile applications, with the company website highlighting secure Azure environments, user experience, and application performance.

AI and machine learning
Use of AI/ML to generate data-driven insights, automate complex processes, and support better decision-making and operational efficiency.

Cloud and infrastructure operations
Support for cloud infrastructure and the technology environment that underpins business applications, users, and data systems.

Strategic IT planning and governance
Tailored IT roadmaps, including 45-day, 90-day, and annual planning horizons, intended to improve IT operations, infrastructure management, and governance.

IT support and service management
24/7, SLA-driven support for user and application management, infrastructure, and data systems.

6. Operating approach: Secure, Operate, Sustain

Secure

Protect technology, data, and business operations. Public company information describes cybersecurity assessments, vulnerability assessment and penetration testing (VAPT), vulnerability management, SOC/SIEM, security operations, and cybersecurity compliance support. Frameworks and standards referenced on the LinkedIn profile include ISO 27001, SOC 2, CMMC Level 2, NIST SP 800-171/800-53, and DFARS support.

Operate

Run technology and business operations more efficiently. Areas listed include managed IT and service desk, cloud and infrastructure operations, Microsoft 365, Azure and AWS support, network/server/endpoint management, backup and disaster recovery, enterprise applications and integrations, ITSM, asset and project management, Procure-to-Pay, workflow automation, generative AI, AI/ML, AI agents, RAG, and AI-powered business applications.

Sustain

Build measurable, resilient, and responsible operations. Sithafal’s LinkedIn profile presents SustainStep as its sustainability-management platform, with support for ESG data collection and management, materiality and double-materiality assessments, value-chain and supplier engagement, supplier ESG assessments, AI-assisted data extraction and validation, Scope 1, 2 and 3 emissions management, and evidence/document management.

7. Product: SustainStep

SustainStep is presented by Sithafal as an AI-powered sustainability-management platform. The company's public product description positions it as a way to bring sustainability data, management, and reporting workflows into one integrated platform, moving beyond periodic report preparation.

- Environmental management — track environmental performance such as greenhouse-gas emissions, energy, water, and waste.
- Social management — organise and monitor social sustainability information and performance indicators.
- Governance management — manage governance indicators, policies, and disclosures.
- Value-chain partner management — engage suppliers and business partners and improve the collection and transparency of sustainability data.
- Materiality management — identify, assess, and prioritise material sustainability topics.
- Carbon and CCTS management — support greenhouse-gas management, carbon accounting, and relevant Carbon Credit Trading Scheme workflows.

The LinkedIn product description references alignment with reporting and disclosure frameworks such as BRSR/BRSR Core, GRI, ESRS, ISSB/IFRS Sustainability Disclosure Standards, CDP, TCFD, and TNFD, as well as relevant California climate-disclosure requirements. Applicability depends on the organisation's obligations and the product capabilities in use; users should confirm current coverage directly with Sithafal.

8. How the company works with clients

- Collaborative partnership: working alongside client teams to understand support needs and deliver solutions.
- Comprehensive IT reviews: the website references TOGAF-based functional reviews to assess organisational structures and technology assets.
- SLA-driven support: the website describes 24/7 support for user and application management, infrastructure, and data systems.
- Tailored planning: IT roadmaps can be shaped around 45-day, 90-day, and annual horizons.

9. Careers and work environment

The careers page invites candidates to join a growing team and highlights an environment intended to encourage innovation, collaboration, and professional growth.

Innovative culture: Creativity and new ideas are welcomed.

Growth opportunities: Continuous learning and challenging projects are highlighted.

Collaborative environment: Teamwork and the contribution of every voice are encouraged.

Benefits: The careers page mentions competitive salaries, health benefits, and work-life balance.

Inclusive workplace: The company states that it aims to create an environment where everyone can thrive.

Commitment to excellence: High standards and dedication are emphasised.

The careers page groups opportunities under Software Development & Engineering, Data & AI, and Business & Marketing. Roles displayed on the page at the time of review included:

- UI/UX Designer
- Global Sales Manager
- Global Marketing Manager
- Business Analyst
- Data Engineer and AI Specialist
